Hi,

Have you ever noticed how you are following a system/strategy and it seems to be going well, but then goes to pot?

Have you looked at the monthly results of a system/strategy that seems to be losing but most months reaches some level before dropping back to zero profit or a loss?

Have you had those months where you start off really well making a profit, only to see it wiped out in a few days?

Of course, I am not saying this is true of every system/strategy/method, but it happens more often than you think.

I know because I have studied it…a lot!

Here is an example.

It's called the "Not for everyone lays" and it is a system that on the first month I officially launched it made 100 points.

Yes, you didn't miss read it 100 points!

Month	Year	Selections	Wins	S/R	ALO	P/L
10	2025	242	212	87.6	5.98	28.47
11	2025	290	245	84.48	4.65	30.84
12	2025	283	240	84.81	5.14	14.17
1	2026	285	240	84.21	4.93	13.48
2	2026	259	230	88.8	4.29	100.97
3	2026	301	243	80.73	4.27	-9.46
4	2026	117	97	82.91	3.72	20.69
7 Months		**253.86 APM**				**28.45APM**

That was February, but nearly everyone lost hope in March because it ended up -9.46 points.

Don't get me wrong, I don't blame them no one wants to see a system do so well and then do so bad.

We have seen that too many times.

But here is the thing.

In March the system got as high as 19 points profit, before falling back near the end of the month because of some bigger losers.

Now nobody wants to miss out on a 100-point month…

…But they do want to miss out on a -9.46 loss.

Which is where I want to make my point.

Although you may have lost out on 100 points you could have still made 10 points.
And you could have missed -9.46 but still made 10 points.
In April you would have made 10 points by the 9th

Now it doesn't have to be 10 points.

It could be 5, 10, 15 or even 20…

…But from my research 5 to 15 is probably where the sweet spot is.

What's 1 point.

A point is just a unit of stake.

Most people divide the bank by 100 giving

- Starting bank: £100
- 1 point = £1

So:

- +10 points = **£10 profit**

You really need to look at the system/strategy/method you are following to decide what the highest bank draw down could be and adjust your stake accordingly.

That is the first part of the strategy.

Now let's look at the most powerful part of the strategy.

The power of compounding.

You have probably heard of "Compounding".

Einstein supposedly called it the "*8th Wonder of the world*".

Those who use it to their advantage make a fortune.

If you have had any kind of savings you know that generally at the end of the year the bank adds interest on the money you have been saving.

In the UK at the time of writing this, those interest rates are low, typically a couple of percentage points.

You know though that if you take out a loan or have a credit card debt this can be 9% or even 36% that you have to pay in interest.

It's the same thing but in reverse.

You either earn it or pay it!

Before we go into the final part of this strategy, I want to show you one of my favourite sequences of numbers.

It's called "geometric sequence" and looks like this.

1,2,4,8,16,32,64,128,256,512,1024

Now, let's say the number represented a stake which doubled each month.

£1, £2, £4, £8, £16, £32, £64, £128, £256, £512, £1024.

There is one other thing about this sequence you may have noticed and that is that there are 11 numbers.

Or in this example we could call it 11 months.

Our goal is to try and go from £1 stakes to £1024 stakes within 11 months or certainly within a year.

Now let me show you how you can use this with Betting and the 10 points strategy.

Let's say you started this month with £1 stakes (1% of a £100 bank)

So month one we make £10 (£1 x 10).
Now lets 10% of those winnings (This figure is up to you) which is:
£10 x 10% =£1.00. We add that £1 to our orginal £1 stake.

We start month two with stakes of £2.00.
£2.00 x 10 = £20.00 x 10% = £2.00

We start month three with stakes of £4.00
£4.00 x 10 = £40.00 x 10% = £4.00

The power of compounding starts slow but then gradually builds momentum until somewhere along the line the numbers get very big.

This is what this idea looks like over 12 months.

If you are using my [Target profit spreadsheet] here is how you set it up.

	Manual	
Start Date	09/02/2024	Note
Start Bank	100.00	Note
% of Bank for stake	1.00%	Note
Compounding %	10.00%	Note
Target Percentage	1000.00%	Note
Target Profit	100.00	Note

This is how it looks on the main sheet.

Start Stake=	£1.00	1000%	10.00%
Month 1	£1.00	10.00	1.00
Month 2	£2.00	20.00	2.00
Month 3	£4.00	40.00	4.00
Month 4	£8.00	80.00	8.00
Month 5	£16.00	160.00	16.00
Month 6	£32.00	320.00	32.00
Month 7	£64.00	640.00	64.00
Month 8	£128.00	1280.00	128.00
Month 9	£256.00	2560.00	256.00
Month 10	£512.00	5120.00	512.00
Month 11	£1,024.00	10240.00	1024.00
Month 12	£2,048.00	20480.00	2048.00

As you can see it takes a few months to take off, but if you can wait it out then by months 8 and above it builds momentum very quickly.

Ok so before we dive into each part of this in a more detail there are a few questions that may have come up that you need answering.

Let me see if I can help.

Q. Why stop at 10 points?

A. There is nothing in this method written in stone.

If you want to increase this to 15 points or even more then that is up to you.

But, think about what is easy to achieve and what is harder to achieve.

If you had the patience, then you could go for just 5 points per month and try to achieve this over 2 years or maybe longer.

It's far easier to make 5 points per month than it is to achieve 10 points or 15 points (unless you have something you know already works).

To be honest, you will probably find that you don’t get to 10 points every month.

If you followed my LTD selections then one month it finished the month at 8.6 and didn’t reach 10 points.

LTD results (score 9.00 or better)
https://www.cashouttrading.com/aisports/results_ltd_new.aspx

19th December 10.82 (max 12.22) finished the month 12.22

31st January 8.6 (max 8.6) finished the month 8.66

14th February 10.68 (max 15.98) finished the month 0.88

18th March 10.74 (max 31.82) finished the month 24.16

7th April 10.56 (max 20.36) so far

But overall, 10 points seems to be the safest limit to stick to.

Q. Why are the start stakes set at £1

A. They are not, it is an illustration of using the “geometric sequence” of numbers and most people who start betting can not afford to bet with large amounts of money.

It doesn't matter what number you start with, even if it is less, the point is that by aiming for 10 points and trying to double your stake each month…

…Eventually you will end up where you want to be.

Q. I only need to make a couple of £100 a month to help out should I change anything?

A. No, just stop at a number that suits you. I know plenty of people who are happy to make £200 to £300 a month.

Just stop when you make what you are happy with.

Q. If I make the 10 points early, what do I do the rest of the month?

A. Stop and do something else.

Actually if you have the bank or as you build you bank, you could run a number of these on different systems on strategies…

…But it is important to keep them separate or one could drag down your bank and profit.

If you had £200 spare cash you could split the bank in two and run it on two different systems/methods.

Make sure even if it is only on “Paper” or in a “Spreadsheet” you keep the two separate.

Q. Compounding 10% of your stake will be more than 1% of your bank as the stakes grow.

A. Yes, it will, but…

…I think as you get better at doing this and more confident in the results of your method/strategy/system, 5% is within limits.

Again this ideas is not set in stone and if you have more patience and can wait longer to get to where you want to be then you can lower the percentage that you use to increase your stake each month.

I just like following the “geometric sequence” and if that means a little more risk, then I tend to go for it.

In the end it depends on the method/strategy/system and how losers effect your bank and if you can keep betting through a losing sequence.

You just have to understand your highest bank drawdown.

Q. What about compounding your stakes as you win during the month?

A. You could in theory use the same method we are using to build our monthly stake on our daily one.

So instead of sticking with the stake you started the month with, everytime you win, you use some of those winnings to increase your stake.

It could mean you get to the 10 points quicker or you still keep going until the method/strategy/system makes 10 points based on 1 point staking.

Be careful though because this technique can back fire when you have a few losers because you get deeper into loss than you would have, had you used level staking.

Q. What does 10 points look like on a daily basis?

A. Let’s say you have 24 days a month to bet on.

10 points / 24 = You need to make around 0.42 points per day.

I always think this is quite exciting news.

It means you don't have to take on bets that are not on your side…

…It means you can take on bets than give you a better than 50% chance of winning.

Often I suggest lay systems to people because 10 to 12 wins in a row can get you to the 10 points quite easily…

…But bigger losers can knock you back for a bit and it takes a while to recover.

When you only need to make 0.42 points per day, you can look at strong favourites, or Over goal markets and even the Place markets where you don't even have to win.

Q. 12 months seems a long way away.

A. I hear this a lot and often from people who have been trying to make money year after year.

It's April, it seemed like yesterday it was January and before you know it, we will be in December and another year would have past and where would you be?

Many people who play at sports gambling like the thrill and they often need to play at least one market most days.

I get it, I am the same (I have weekends off to check myself).

So why not play this idea and then put some other money aside for trying different things.

If you can find other Systems/Methods/Strategies to make 5, 10, 15 or 20 points a month then that can only be a good thing…

…But start with one and see how you get on.

Q. Do you have any suggestions for Systems/Methods/Strategies you could use.

A. Yes, I do.

I have already mentioned "***Not for everyone lays***".

Since I started sharing these selections live 3 months ago 15 points was achievable each month.

Click Here for more information

https://greyhorsebot.co.uk/page.asp?id=283

LTD selections.

At the time of writing this is closed to new members but I intend to open it again nearer the end of April.

I started giving these selections in December and on average (Selections with a score over 9) have made 13 points per month.

But you could have stopped at 10 points every month easily except one when it ended up at 8.33 points.

In April it reached over 10 points profit on the 7/04/2026

https://www.cashouttrading.com/aisports/results_ltd_new.aspx

PR Ratings.

If you want a system builder or to look through 100 of systems other people have shared then PR Ratings may just be the tool for you.

It has results going back to 2015 and over 300 filters (many originals) to come up with systems and ideas.

You can save systems that you create so you can continue to monitor their performance.

The BTTS Strategy

Maybe the only "Both Teams to Score" guide you will ever need.

"I really applaud the BTTS strategy you've put together....

Following up on my January email, I wanted to share a quick progress report. I've attached a few graphs from my record keeping to save you the long-winded details, but here is the top-level summary:

Start Date: 18 November 2025

Starting Bank: £100

Current Bank today (6 March 2026): £1361 (starting bank included)"

Betting Performance Dashboard							
Void =	9	230					
PLAN A (Variable Stake) Singles & Doubles Combined							
Bets (settled)	Wins	Losses	Strike rate	Total Stake	Net Profit	ROI	Avg Odds
221	155	66	70.1%	£6,727	£1,262	18.8%	1.89
Avg Stake	Start Bank	End Bank					
£30	£100	£1,362					

Monthly Summary (Plan A)							
Month	Bets	Wins	Losses	Stake	Net Profit	ROI	Avg Odds
2025-11	26	20	6	£359	£101	28.2%	1.93
2025-12	43	32	10	£719	£161	22.4%	1.76
2026-01	77	48	22	£1,838	£340	18.5%	1.85
2026-02	72	50	21	£2,974	£781	26.3%	2.00
2026-03	12	5	7	£837	(£122)	-14.6%	1.77

Obviously, this user is using an aggressive staking strategy to increase his stakes each month but the point is, the method works.

Click here to find out more about the BTTS strategy.

https://bluebelldata.thrivecart.com/btts/

Football Price Statistical Tool

I use this tool everyday now to pick out matches to use on the First Half Over 0.5 Goal market.

It can be uncanny how sometimes the predicted time of the first goal is so accurate.

I think this could be one of the strategies where you go got a daily amount of 0.42 or better.

But the tool can pick out BTTS matches and LTD matches accurately.

https://bluebelldata.thrivecart.com/fspt/

The Greyhound cards software.

"For feedback - I am loving the greyhound cards and so impressed with all the excellent educational videos you post. I am on day 31 of my 1% compounding bank building and exactly on track."

Click here to find out more about the Greyhound Card Software.

https://ghracesoft.co.uk/

That a list I think could be useful for you.

I hope you enjoyed this guide and found it useful.

Let me know if you have any questions.

Until Next Time

Malcolm.

READ THIS - IT'S IMPORTANT: Disclaimer:

account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular betting program. One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight.

In addition, hypothetical betting does not involve financial risk, and no hypothetical betting record can completely account for the impact of financial risk in actual betting. For example, the ability to withstand losses or to adhere to a particular betting program in spite of betting losses are material points which can also adversely affect betting results. There are numerous other factors related to the markets in general or to the implementation of any specific betting program which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect actual betting results.

HYPOTHETICAL OR SIMULATED PERFORMANCE RESULTS HAVE CERTAIN LIMITATIONS. UNLIKE AN ACTUAL PERFORMANCE RECORD, SIMULATED RESULTS DO NOT REPRESENT ACTUAL BETTING.

ALSO, SINCE THE BETS HAVE NOT BEEN EXECUTED, THE RESULTS MAY HAVE UNDER-OR-OVER COMPENSATED FOR THE IMPACT, IF ANY, OF CERTAIN MARKET FACTORS, SUCH AS LACK OF LIQUIDITY. SIMULATED BETTING PROGRAMS IN GENERAL ARE ALSO SUBJECT TO THE FACT THAT THEY ARE DESIGNED WITH THE BENEFIT OF HINDSIGHT.
NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFIT OR LOSSES SIMILAR TO THOSE SHOWN
